**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 15, 27 and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by Unland (US 6 161 523). Unland discloses a means for determining a base ignition angle based on instantaneous engine speed and load (10), a means for determining a first ignition angle adjustment (12), a means for determining a second ignition angle adjustment (16, 17, 11 and 12) by the combination of the base angle and the first adjustment and the second adjustment (Col. 2, lines 15 – Col. 3, line 16) to achieve the maximum efficiency in an internal combustion engine.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15-21, 26 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Unland (US 6 161 523) in view of the “Admitted Prior Art” as described in the applicant’s specification (page 1, line 10 – page 2, line 4). Unland discloses a means for determining a base ignition angle based on engine speed and load (10), a means for determining a first ignition angle

adjustment (12), a means for determining a second ignition angle adjustment (16, 17, 11 and 12) by the combination of the base angle and the first adjustment and the second adjustment (Col. 2, lines 15 – Col. 3, line 16) to achieve the maximum efficiency in an internal combustion engine. However, Unland does not show when the knock limit control would trigger. The “admitted Prior Art” as described in the applicant’s specification shows that the recirculation exhaust rate, the adjustment of the camshaft, the motion of the control valve, the valve train, the engine temperature and the coolant temperature/flow rate would be known manipulated variables. Since the prior art references art from the same field of endeavor, the purpose disclosed by the “admitted Prior Art” would have been recognized in the pertinent art of Unland. Therefore, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide the device of Unland with the manipulated variables as taught by the “Admitted Prior Art.”

#### ***Allowable Subject Matter***

Claims 22-26 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
